Given $\angle A$, whose measure is not known.

Step 1 Draw a line l and choose a point P on it.

Step 2 Place the compasses at A and draw an arc to cut the rays of $\angle A$ at B and C .

Step 3 Use the same compasses setting to draw an arc with P as centre, cutting l in Q .

Step 4 Set your compasses to the length BC with the same radius.

Step 5 Place the compasses pointer at Q and draw the arc to cut the arc drawn earlier in R .

Step 6 Join PR . This gives us $\angle P$. It has the same measure as $\angle A$.

This means $\angle QPR$ has same measure as $\angle BAC$.
